- I - NEW ABSTRACT

Telescope optical device constituted by a concave mirror 1, a concave actuating membrane 2, and magnetic dipoles 3 and 4 tied to the telescope; the actuating membrane 2 microshapes the membranous mirror 1, and the 5 magnetic dipoles 3 and 4 macroshape the actuating membrane 2.
Folding of the mirror 1 and of the actuating membrane 2 by regular distortions of the original concve shape.
